## ELECTRIC BICYCLES

This superb unisex tourer has style and comfort at its heart. The front suspension, sprung seat and touring style riding position give an extremely comfortable ride and the step through style gives easy access for the rider.

In low range the speed is reduced and the power from the 200 watt front hub motor overcomes the drag of this more difficult surface, giving you complete control and ease of use.

Equally at home on road or cycle tracks this all purpose bicycle will take you from town to country with ease.

The EBC (electronic battery controller) gives the Mercury a uniquely variable power delivery system to suit many different terrains and weather conditions. Levels of required assistance can easily be selected from the controller, situated conveniently on the handlebars, giving the rider complete confidence and the opportunity to enjoy their ride.

# £749

# MERCURY

PRICE CORRECT AT TIME OF PRINTING - April 10 - Please check Website or Phone for details.
